

# HMT Common Base Platform

Unrivalled and future-ready

The HMT is renowned for its operational reliability and impressive capabilities. Exceptional off-road performance and high payload capacity combined with light weight give it unrivalled tactical and strategic mobility.

Supacat's design philosophy allows a variety of vehicle types, all sharing proven sub-systems leading to increased reliability and reduced logistic support. The differing vehicles can be configured with a variety of mission modules and protection levels to best suit operational requirements. These variations start with 4 x4 or 6x6 drivelines and end with open or closed architectures across a GVW ranging from 6500-12000kg – all from the HMT Common Base Platform family of vehicles.
